Uni-Scheduler

Creates a room table for university courses...

Additional information and instructions

Updated: 04/22/2019

Overview

Schedule builder application will design your excel file into a room schedule table. Regardless of how it is easy to read the table, it will also:

- Notify about 6 + possible errors (for example if courses conflict with each other if the time between courses is less than 15 minutes, etc.)
- Creates a table based on a course type (for example, if it is hybrid, it will be in both classroom table and hybrid table)

Goals

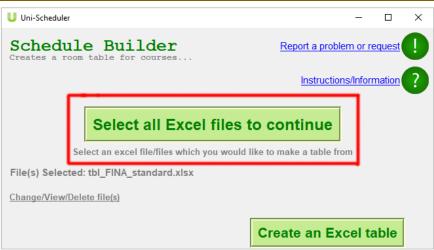

Use Python programming language to develop an academic course scheduling program that will reduce internal course scheduling process time by up to 50%

Instructions

- **Downloading Instructions**

Still in development

- Program Instructions: Files manipulation

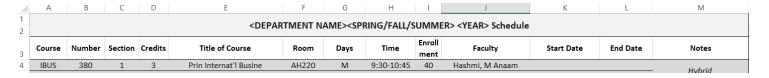

Starting from this window you will need to select at least one file by clicking

Select all Excel files to continue

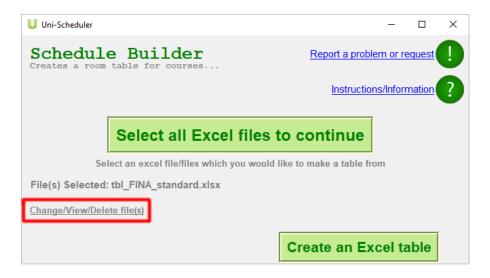

Select an excel file/files which you would like to make a table from

on "Select all Excel files to continue"

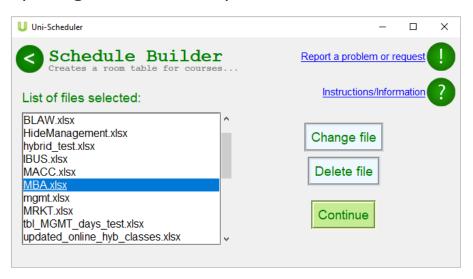

! Please note that you can select only excel files and it needs to follow the same format. A table example format:

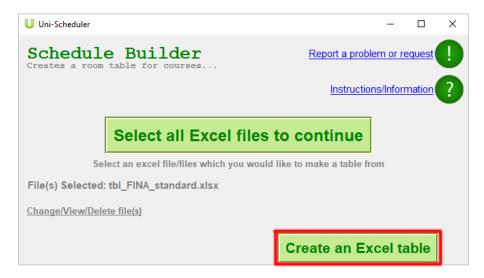

If you want to change, delete or simply view all selected file you can do it by clicking on "Change/View/Delete file(s)"

By doing so, it will move you in another window similar to this:

Press "Continue" to go back to the previous window

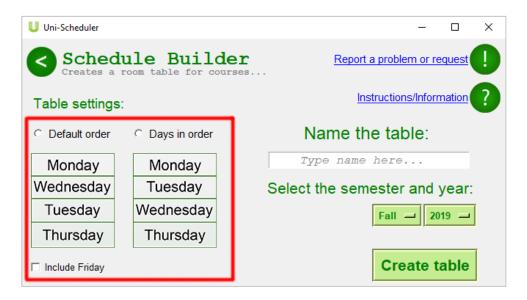

If you are done adding or changing files let's move to a more exciting part "Create an Excel table"

Program Instructions: Table settings

Uni-Scheduler

a table, the program needs to make sure it will follow your requirements (program will allow you to create a table without selecting any of these by having default settings, but it is not recommended).

The days order, and if it needs to include Friday as a day is one of the critical section in the table settings, it will result in how the blocking table will look.

Fill out the rest of the information such as name, semester and year (note that summer is currently not available as an option). And let's create a table by pressing "Create table"

Program Instructions: The table is ready!

The process of creating the table shouldn't be long. Now you will either have a window with errors or window with no errors.

Let's take a scenario where we have errors.

The program can find multiple types of errors and most important ones will show on this small window.

All types of errors are:

Course conflicts with another one

- The course has less than 15 minutes difference than another one
- Course capacity does not match what is says on the university website

The cell does not follow the format

- The dates for the course could be wrong
- Missing data on cell

Red – Important (could be missing of data, but the program will still try it best to fit it)

Purple – Information could be wrong (it suggest to check the information double)

Yellow - Missing data and others (not an issue for the program, but suggest to fix it)

While this window will show only red type errors, you can additional errors by opening

"Open excel copies" open excel copies which is highly essential. It will open all excel files where you will be able to see exactly where an error happen with a comment with additional details is. Which will look something like this:

| MGMT | 300 | 7 | 3 | Intro to MIS | MH209 | MW | 8-9:15 | 36 | Kaliski |
|------|----------|-----------|-----|-------------------------|-------|----|------------|----|---------|
| MGMT | MGMT | 300-8: | | Intro to MIS | MH209 | MW | 9:30-10:45 | 36 | Kaliski |
| MGMT | conflict | s with MG | TMG | Intro to MIS | MH102 | TH | 11-12:15 | 25 | Kim(LC) |
| | 441-1 | | | | | | | | |
| MGMT | | | | Creativity & Innovation | MH209 | MW | 3:30-4:45 | 36 | Bowyer |

Clicking on "Open master table" Open master table will result in opening a blocking table which will look similar to this

| | all 2019 | 08:00 | 09:15 | 09:30 | 10:45 | 11:00 | 12:15 | 12:30 | 12:45 | 01:45 | 02:00 | 02:10 | 03:15 | 03:20 | 03:30 | 04:45 | 05:00 | 05:20 | 06:00 | |

Note that this table will also create a schedule for other types of courses such as online, hybrid, telepresence, etc. Also, it will split course sessions if it exists.

Final Note

- Project is open source

This project is open source which means that anyone who interested can either download or make changes to the project which is great because any student worker who knows a bit of coding will be able to be a part of it.

https://github.com/igorneaga/schedule

The main reason for this program is to help reduce the amount of time developing a class schedule/find available room, conflicts, and others.

It will be very appreciable if you could share your feedback or any ideas!

Thank you!
