Uni-Scheduler

Creates a room table for university courses...

Additional information and instructions
Updated: 03/22/2019

Overview

Schedule builder application will design your excel file into a room schedule table. Regardless of how it is easy to read the table, it will also notify you about any conflicts you have or will suggest you changes(for example - the time between classes should preferably be 15 minutes.)

Goals

Use Python programming language to develop an academic course scheduling program that will reduce internal course scheduling process time by up to 50%.
